

Team: Binary Ninjaz

Report of last week's work:

- Shaun did the finishing touches on the user settings, finished up the graphs and added to the description of the system.
- Letanyan fixed up the filtering of graphs and helped make the approximate yield calculation more accurate.
- Sizo added the web homepage, reviewed the edit information and tested on different browsers.
- Teboho added to the description/intro of the system, fixed some inconsistencies on the web page and made hints more user friendly.
- Kevin finished up the graphs, helped decrease power usage and helped with the approximate yields.
- John finalised the tutorial, helped decrease power usage and made texts simpler for the user to understand.

Comment: The deployment documentation still needs a bit more information, but is almost complete.

Coming week's work assignment:

Name:	Work assignment:
Shaun Yates	Simplify invalid input messages, deployment drills, usability testing
Letanyan Arumugam	Sync app design, deployment drills
Sizo Duma	Populate database with real world data, deployment drills, Sync app design
Teboho Mokoena	Further testing on different versions, deployment drills, usability testing
Kevin Reid	Populate database with real world data, deployment drills, usability testing
John Ojo	Sync app design, further testing on different OS versions, deployment drills
